

Warm-Up Check — Graphing Quadratics

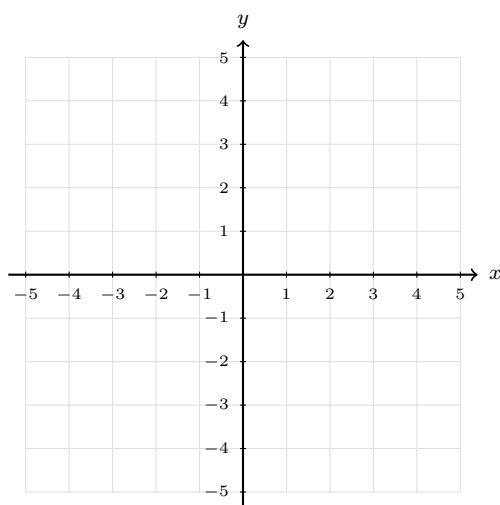

Name: _____ Date: _____

Show your work. This is just a check-in, not a test.

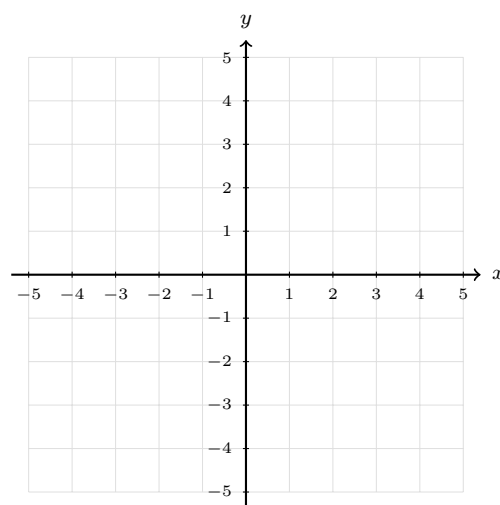

Graph each quadratic

Mark the vertex, then plot enough points to show the shape.

1. $y = -(x + 2)^2 + 3$

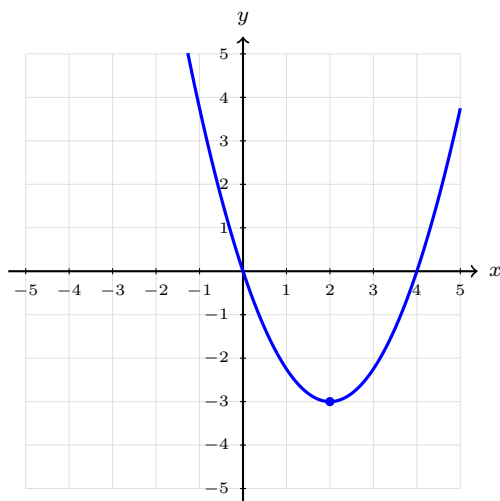

2. $y = 2(x - 3)^2 - 4$

Write the equation of each graph

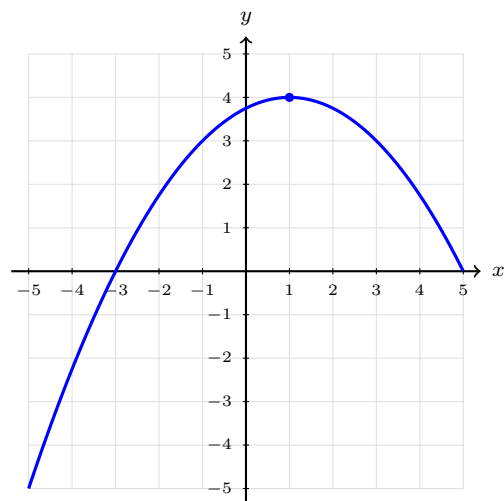

Each is a parabola $y = a(x - h)^2 + k$. Read off the vertex, use one more point, and write the equation.

3.

Equation: _____

4.

Equation: _____

Complete the square

Write each in the form $a(x - h)^2 + k$. Show your steps.

5. $x^2 - 6x + 4$

6. $2x^2 + 8x + 3$

Putting it together

7. For $y = x^2 + 2x + 3$: complete the square to get vertex form, then graph it.

Vertex form: _____
